

Systems Integrity - Capability Sheet

Version v1.0 | 2026-07-24 | Managed deployment review

Public summary for evaluation. It is not an executed agreement, a warranty, or a certification. Final scope, controls, residency, and terms are defined in your order form, data-processing agreement, and counsel-reviewed contract, which control over this document.

01

What this department is for

Inspect service health, evidence integrity, change boundaries, and recovery readiness. It is a specialist workbench operated through Jueni Biashara AI: it prepares the work, keeps the source and next move visible, and sends decisions that carry weight to the people responsible.

02

Best for

Operational health reviews, release evidence, configuration drift, backup checks, and incident preparation.

03

What it prepares

- Health and integrity summaries
- Change and rollback evidence
- Recovery and incident checklists

04

What it needs from you

- Approved system scope
- Telemetry and manifests
- Change authority

05

What changes

- Visible system drift
- Traceable change evidence
- Clearer recovery decisions

06

Human authority stays with you

Destructive changes, credential rotation, deployment, shutdown, and recovery activation require authorised operators.

07

Deployment status

Managed deployment review. Installation follows a scoped deployment contract - isolation, credentials, tools, storage, logs, updates, rollback, support ownership, representative validation, and acceptance review - before any live business system is touched.
